

CLAIMS FOR PANORAMA SIDE VIEW MIRRORS

I claim that:

1. Will increase safety in automobile traffic by giving the drivers a better view of any vehicle or other obstruction in the present side mirror 'blind areas' of the basic vehicle without diverting the driver's attention from possible obstructions to the front of the vehicle
2. Will ease the tension on the drivers by giving him/her a quick view of any vehicles coming up beside his/her vehicle without the need to look back over the driver's shoulder thus diverting the driver's attention from the front view of the driver
3. Relieve the driver of the need to divert his/her attention from the front to the side to determine if any vehicle is beside him/her in the blind spot of current mirrors
